

Smart Parking Technology | Media Release

For release 27/03/2019

Smart Parking and City of Adelaide have developed a smart city parking solution and app.

Smart Parking have installed a SmartPark system in approximately 2,800 mixed use parking pays across the City of Adelaide, and developed a Smart Parking app called Park Adelaide.

The project is a key initiative of the City of Adelaide's ongoing Smart City agenda, and the app will be the interactive customer-facing element of the project.

Fully interactive with a raft of different capabilities, the app will provide directions and help navigate motorists to available parking spaces, as well as provide accurate, real-time information around parking availability and controls such as time limits and tariffs.

The payment feature allows users to pay for their desired parking session, and an alert to remind people when their time is about to expire means they can remotely top up their payment to the maximum time limit should they be held up.

To meet a unique request from City of Adelaide, we've also developed an app feature that allows users the option of a one-off 'Extend Stay', allowing them to extend their parking 15 minutes beyond the maximum time limit for a fee of \$5.50

The City of Adelaide will be running a media campaign to encourage visitors and residents to download and register on the app prior to travel, meaning they can enjoy a hassle free journey and parking experience.

Smart Parking Group CEO, Paul Gillespie, comments "Our Smart Parking team have been working on this project closely with the City of Adelaide, and the level of active collaboration from both parties has resulted in a parking system and app that will make a real difference to visitors and citizens of Adelaide."

Smart Parking Technology | **Media Release**

Smart Parking Limited (ASX:SPZ) | A Global Parking Business

Smart Parking Limited is a pioneering technology innovator and services company in the parking industry.

With offices in Australia, New Zealand and the UK, along with a rapidly growing global network of expert partners, our aim is to bring our intelligent parking sensors and integrated smart parking services to the world.

Each year, we install tens of thousands of sensors in a range of environments including shopping centres, supermarkets, airports, commercial parking sites, universities and large scale municipal street environments.

To date, our advanced real-time vehicle parking sensor solution, known as SmartPark, has been adopted in 17 countries.

Alongside the technology products division, our managed services division operates and manages thousands of car park spaces across the UK using complementary Automatic Number Plate Recognition/License Plate Recognition (ANPR/LPR) technology. This can be used as a single solution or with the option to be combined with Pay & Display or integrated with sensing technology.

Smart Parking Limited has been an Australian Securities Exchange (ASX:SPZ) publicly listed company since early 2011.
